YOUR STOCK & OPTIONS REVIEW AND INSIGHT SYSTEM

# Better trading starts with understanding.

Understand strategy performance, per-stock results and capital efficiency.
Make review the starting point for developing your trading skills.

**Under active development · Demo available on request · Planned distribution: shareware**

Pricing and usage terms are not yet announced.

Actual TAD screen - wholly synthetic demonstration account. Holdings, remaining cost and saved-price unrealized P/L.

**STRATEGIES**

Compare contributions.

**EACH STOCK**

Connect stock and options.

**CAPITAL**

Understand costs and time.

STRATEGY × SECURITY

# Two perspectives.
# One connected review.

See what each approach contributed, then bring the approaches used on the same underlying together.

01 / STRATEGY ANALYSIS

## Each strategy.
## Its contribution.

Compare stock trades and classified option strategies, including supported LEAPS Calls, CC, PMCC and spreads.

• Compare realized contributions across strategies and their securities.

• Review costs, P/L and qualified returns, from open trades to completed lifecycles.

• Explore capital use, holding time and option support in the explanations.

02 / PER-STOCK ANALYSIS

## Each stock.
## Its contributions.

Connect stock trades, underlying options and dividends, including securities you have already exited.

• Separate stock P/L from each classified option strategy’s contribution.

• Review period realized income; inspect current holdings and unrealized P/L separately.

• Filter by broker, account and period; follow contributions back to the trades.

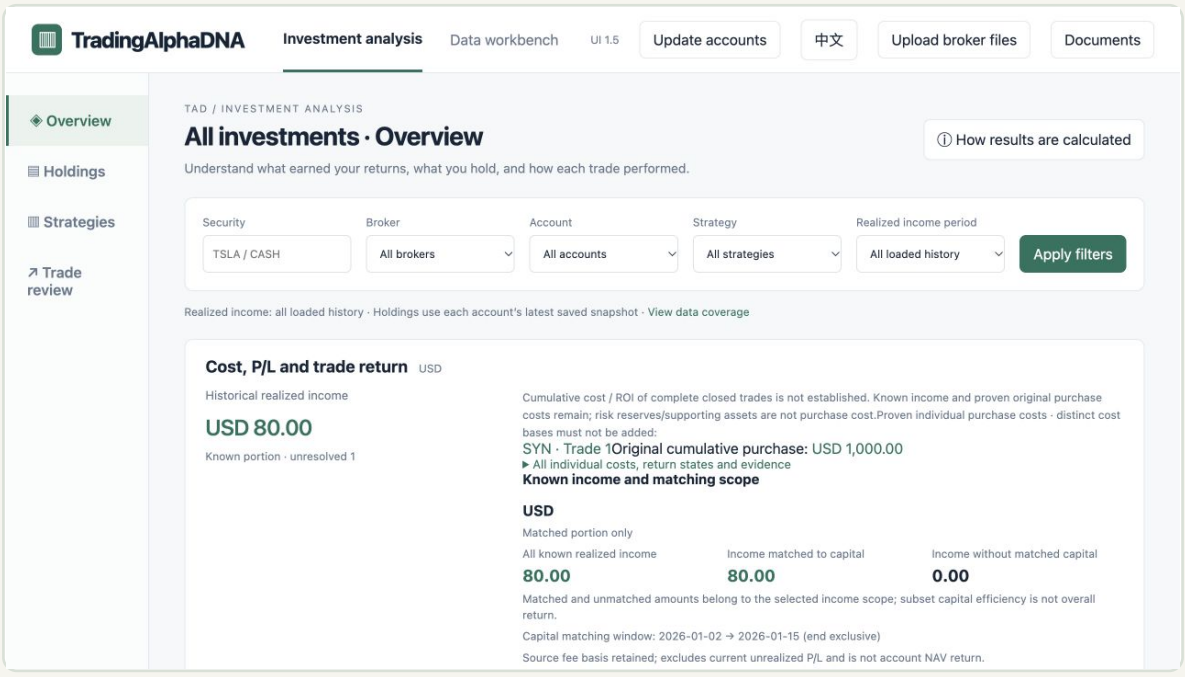

### Stock trades lost money. LEAPS made money.

Different contributions can coexist on one underlying. Inspect them separately before reading the security-level result. Positive efficiency for a matched subset does not imply an overall profit.

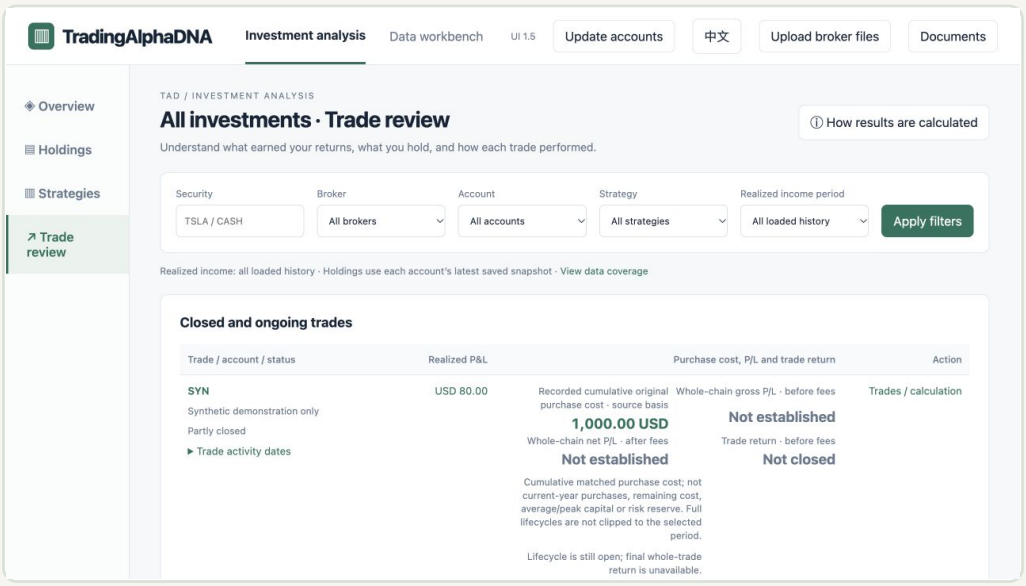

Contributions follow supported classifications. CC/PMCC may show short-Call income only; supporting stock or long-Call P/L is separate. Period realized income, current unrealized P/L and whole-trade return retain different scopes.

REAL SCREENS. SYNTHETIC DATA.

# Follow the result. Review the trade.

01 / Overview: explore security and strategy contributions. In this demo, 80 USD stock gross realized profit is supported; one option realization remains uncomputed.

02 / Trade review: status, recorded purchase costs and realized P/L together. The partly closed demo trade has no final whole-trade ROI yet.

MAKE SENSE OF YOUR TRADING

# Know your trading better.

## 01 Strategy analysis

Compare realized contributions across traded strategies, then explore their securities, trade records, costs and supported returns.

## 02 Per-stock analysis

Review a security together with its underlying options and dividends. Explore which traded strategies contributed gains or losses.

## 03 Accounts and holdings

Review supported broker exports across accounts, with stock, option and cash positions, remaining costs and dated saved valuations.

## 04 A fuller trade perspective

Follow open, partly closed and closed trades. See whole-trade ROI when the completed lifecycle and cost evidence support it.

## 05 Capital, with time in view

Explore holding time, average occupied capital and time efficiency in the explanations, alongside their matched scope.

## 06 Options in context

See which shares or long Calls support your short Calls, and where that support is still unconfirmed.

## 07 Import trades for review

Import supported broker transaction files and review your updated holdings and trades in one place.

## 08 Understand your results

Open a result to see the related trades and understand how each gain or loss was formed.

## Profit. Strategy. Capital efficiency.

See the trades behind each result. Incomplete results stay marked.

Supports specific Chase, Moomoo and E*TRADE export formats. Results depend on source coverage; saved quotes are not live prices. Whole-trade ROI and capital efficiency require qualifying evidence and are not account growth. Option and historical-strategy coverage varies. Statement PDFs are archived for reference, not automatically extracted. This is a product preview for review, not automated trading or tax-filing output. Under active development. Demo available on request. Planned distribution: shareware. Pricing and usage terms are not yet announced.
